

A QuickBooks administrator password is needed to access all your data which a user have stored all your data in QuickBooks files. To keep a strong password it protects all your business from an unauthorized access related to folks most crucial information or their private details that kept as hidden. Google Assistant is Google's smart assistant for mobile devices. It features a conversational system that can answer your questions, as well as perform tasks for you. The Google Assistant app is available on Android and iOS devices.

## How to Change Password on QuickBooks

The first way is to download the Google Assistant app from the Google Play Store. Once you have the app downloaded, open it and sign in with your Google account. Once you're signed in, you'll be able to access all of your Google Assistant features.

Another way to get Google Assistant is to enable it on your Android device. To do this, go to Settings > Apps & notifications > Default apps > Assist & voice input. From here, [Change Password on QuickBooks](#) select Voice assistant and choose Google Assistant from the list of options.

You can also activate Google Assistant by saying "Hey Google" or "Ok Google." To do this, go to Settings > Apps & notifications > Advanced > Default apps > Voice input. Turn on Say "Hey Google" or "Ok Google." Now when you say those phrases, your phone will unlock and show you a list of commands that you can say.

## How to Reset Passwords in QuickBooks Desktop

Finally, if you have a compatible Android device, you can use the "OK Google" hotword detection feature. This feature allows you to say "OK Google" anywhere on your device to launch the Assistant UI. To enable this feature, go to Settings > Security & location > Smart Lock for Passwords. Then turn on Unlock with Voice Match and follow the prompts to set up your voice model.

### ***Pros and Cons of using Google assistant***

When it comes to choosing a virtual assistant, there are many options available. Google Assistant is one of the most popular choices, but it's not without its drawbacks. Here are some pros and cons to consider before using Google Assistant on your Android device.

- You can use Google Assistant hands-free by activating the "Hey Google" hotword. This is convenient when you're driving or cooking and can't have your hands free to type.
- Google Assistant is available on a wide range of devices, including phones, tablets, smart speakers, and more. This means you can use it in many different situations and locations.
- Google Assistant integrates with many different apps and services, making it a very versatile tool. For example, you can use it to control your music playback, send messages, set alarms, and much more.
- Google Assistant requires an active internet connection to work properly. This means if you're in an area with poor or no internet coverage, it may not be able to help you.
- While Google Assistant can do many things, it doesn't always do them perfectly. Sometimes it may mishear your commands or misunderstand what you want it to do. This can be frustrating if you're trying to get something specific done.
- Finally, because Google Assistant is powered by artificial intelligence.

## ***Conclusion***

There are many ways to get Google Assistant on your Android device, and each has its own set of benefits. If you're looking for a simple and quick way to get started with Google Assistant, we recommend using the built-in method. However, if you want more features and customization options, you might want to try one of the third-party methods.
